

Butler Auth 1.0 is out!

Strong, **open source** login security for Qlik Sense Enterprise on Windows.

Strong login security does not have to be difficult or expensive.

[Butler Auth](#) is open source (free!) and greatly simplifies using authentication services such as Microsoft, Google, Keycloak, Okta, Auth0, LDAP and others with Qlik Sense Enterprise on Windows.

Features offered by these services (such as 2-factor authentication, hardware security keys etc) are automatically

available via Butler Auth.

Version 1.0 supports 9 different authentication providers:

- Okta
- Auth0
- Keycloak
- Google
- Microsoft
- LDAP
- Local file
- Single user
- Facebook

This newest member of the Butler family even has its own doc site:

<https://butler-auth.ptarmiganlabs.com>
